졸업프로젝트 면담

2026.03.20.(금)

Overview

1. Geometry Representation
2. Geometry Processing
3. Shape Analysis
4. Deformation & Animation
5. Design / Generation / Applications

Research Interest

2. Geometry Processing
    - Mesh Processing
    - Shape Abstraction

4. Deformation & Animation
    - Cages, Deformation, Interpolation
    - Rigging, Interaction

1. Mesh Processing

- Simplifying Textured Triangle Meshes in the Wild

  복잡한 3D 모델을 줄이면서도 텍스쳐 품질 유지

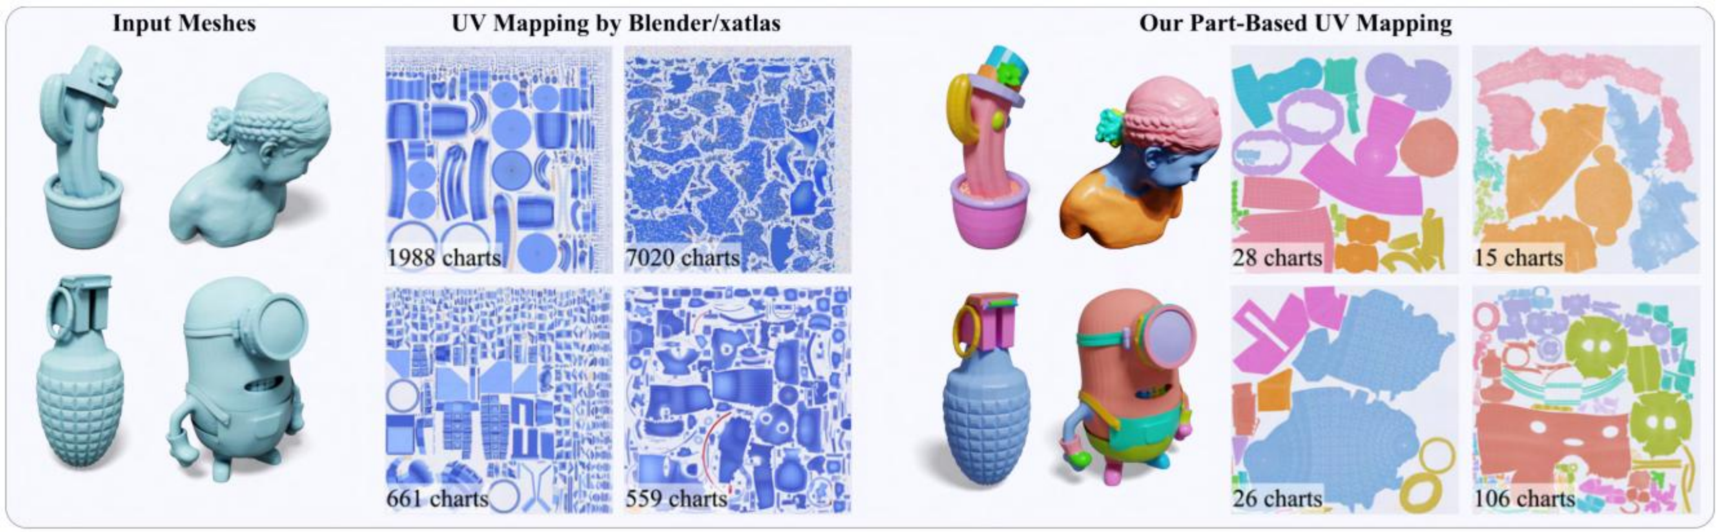
1. Mesh Processing

- Simplifying Textured Triangle Meshes in the Wild

  복잡한 3D 모델을 줄이면서도 텍스쳐 품질 유지

- PartUV: Part-Based UV Unwrapping of 3D Meshes

  3D 모델을 잘 펼쳐서 텍스처 입히기 쉽게 만들기



1. Mesh Processing

- Simplifying Textured Triangle Meshes in the Wild

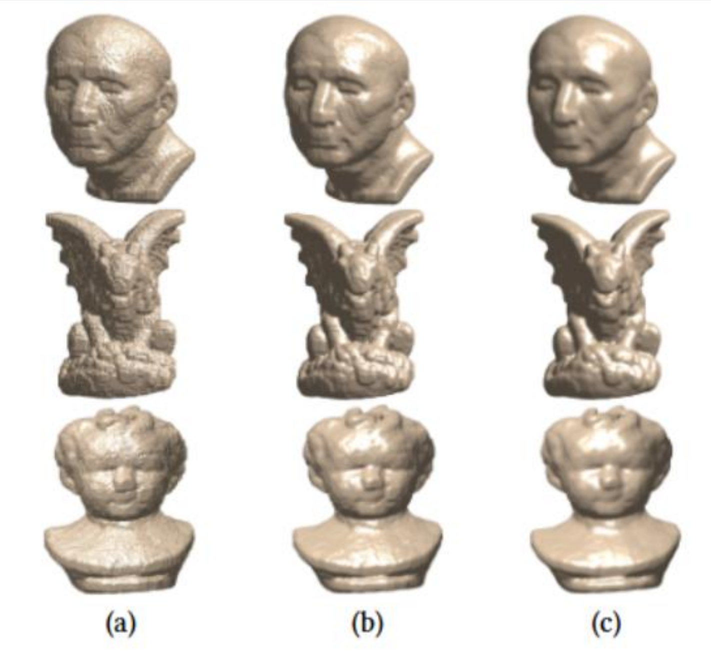
  복잡한 3D 모델을 줄이면서도 텍스쳐 품질 유지

- PartUV: Part-Based UV Unwrapping of 3D Meshes

  3D 모델을 잘 펼쳐서 텍스처 입히기 쉽게 만들기

- A Fast, Efficient, and Robust Feature Protected Denoising Method

  노이즈는 제거하면서 중요한 형태는 유지



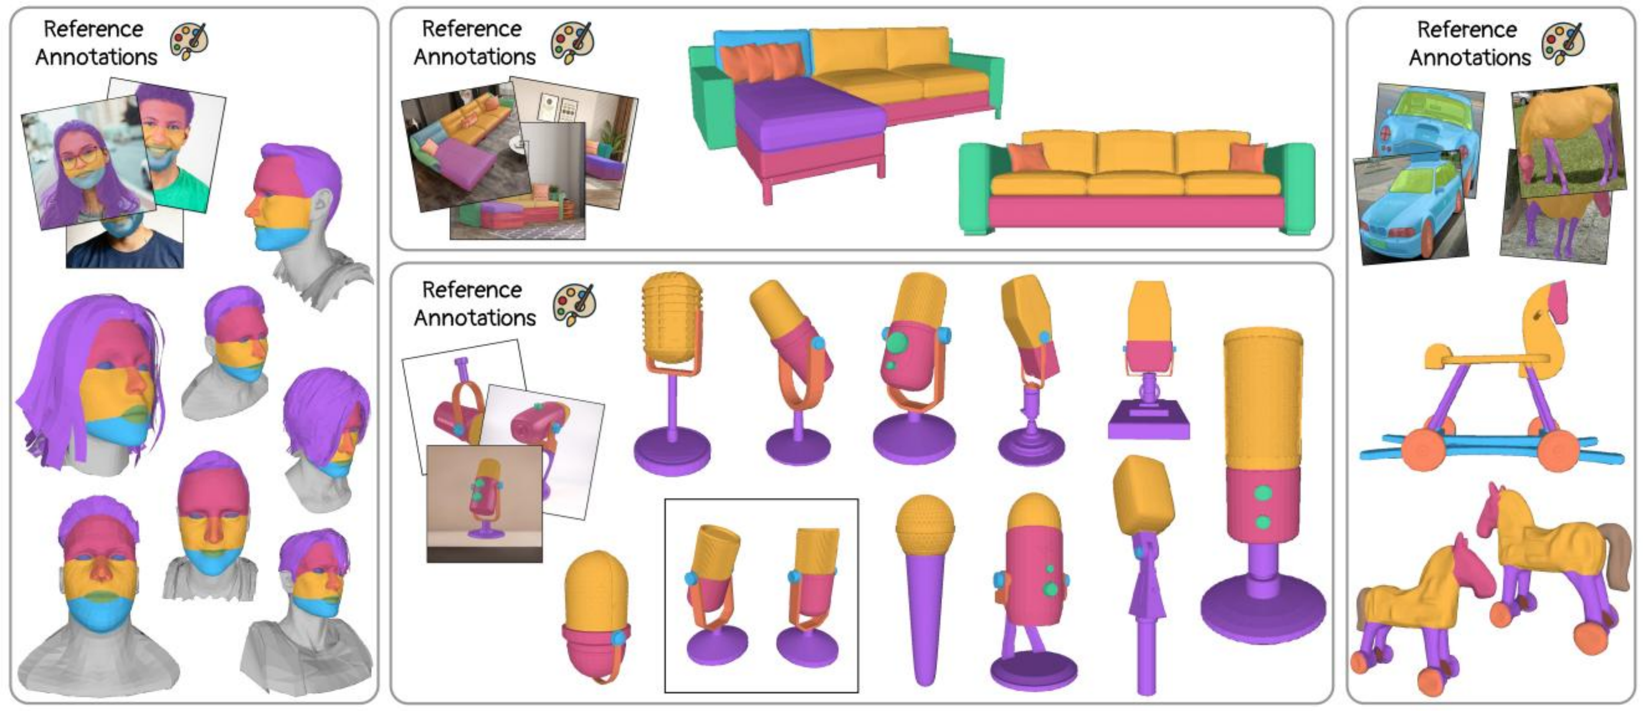
2. Shape Abstraction and Structural Analysis

- ASIA: Adaptive 3D Segmentation using Few Image Annotations

  적은 데이터로 3D 모델을 자동으로 나누는 AI

- Light-SQ: Structure-aware Shape Abstraction with Superquadrics for Generated Meshes

  복잡한 형태를 단순한 수학적 도형으로 표현



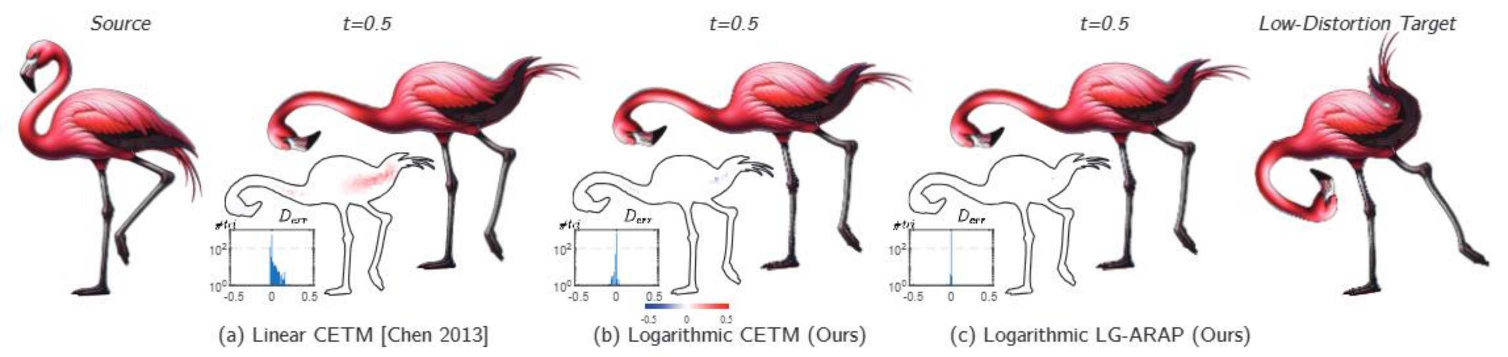
3. Cages, Deformation, Interpolation

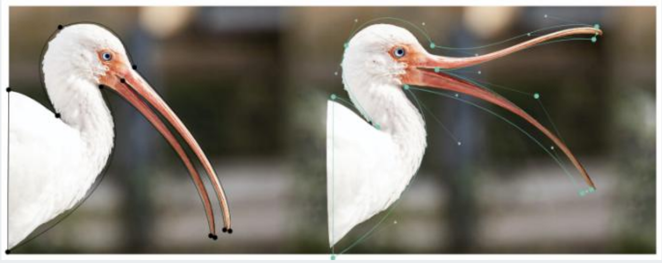
- On Planar Shape Interpolation With Logarithmic Metric Blending

  2D 형태를 자연스럽게 섞는 방법 개선

- Variational Green and Biharmonic Coordinates for 2D Polynomial Cages

  Cage 기반 변형을 부드럽게 만드는 수학적 기법





4. Rigging, Interaction

- RigAnything: Template-Free Autoregressive Rigging for Diverse 3D Assets

  어떤 3D 모델이든 자동으로 리깅해주는 AI
